An analysis tool for 12-lead ECG interpretation - Kingston University Research Repository An analysis tool for 12-lead ECG interpretation Gregory, Joanne (2006) An analysis tool for 12-lead ECG interpretation. British Journal of Cardiac Nursing, 1 (5), pp. 216-221.

**An-analysis-tool-for-12-lead-ECG-interpretation—Kingston**

A standard 12-lead ECG report (an electrocardiograph) shows a 2.5 second tracing of each of the twelve leads. The tracings are most commonly arranged in a grid of four columns and three rows. The first column is the limb leads (I, II, and III), the second column is the augmented limb leads (aVR, aVL, and aVF), and the last two columns are the precordial leads (V 1 to V 6 ).

**Electrocardiography—Wikipedia**

Accurately and systematically interpret and distinguish between a wide variety of normal and abnormal cardiac rhythms and 12 lead ECGs. Critically evaluate the evidence-based use and limitations of ECG interpretation to support recommendations in patient care for people with complex presentations.

**12-Lead-Electrocardiogram-Interpretation—University-of-York**

Introduction to 12 Lead ECG Interpretation. This advanced two day workshop is for registered nurses (RN). It is delivered by an expert nurse on an on demand basis. Topics include, identifying the leads of the standard 12 Lead ECG, defining the anatomical position for the placement of chest and limb lead, determining which portion of the heart each lead “sees”, recognizing ECG changes for ischemia, injury and AMI, differentiating right bundle block from left bundle branch block, as well as ...
