Philosophical Conception Of

Propositional

The philosophical conception of ML is grounded by a precise theory of propositions, and in particular, by the theory of propositions derivable from the theory of relations developed in Zalta, [1988a], and.2On this theory, propositions are defined as 0-place relations that are governed by: (a) a derived abstraction schema that comprehends the domain of propositions, and (b) theoretically-

Councill, Lee Giles, Pradeep

Teregowda): The definitions of propositional modal logic are traditionally formulated in the following way. 1 First, a formal language is defined, usually with atomic formulas p, q, \dots and complex formulas involving the connectives \neg, \wedge and the operator. Models M for this language are then defined as triples $\langle W, R, V \rangle$ in ...

In traditional logic, the role of

Get Free A Philosophical Conception Of

Propositional functions is approximately held by terms. In traditional logic, statements such as 'dogs are mammals' are treated as postulating a relation between the terms 'dogs' and 'mammals'. A term is treated either extensionally as a class of objects or intensionally as a set of properties.

Propositional Function (Stanford Encyclopedia of Philosophy)

This theory abandons several key features of the traditional Fregean conception of propositional content, including the idea that propositions are the primary bearers of truth conditions, the distinction between content and force, and the concept of entertainment. The main difficulty for this tra...

Propositional Content - Oxford Scholarship

In philosophy, a proposition is the meaning of a declarative sentence, where " meaning " is understood to be a non-linguistic entity which is shared by all sentences with the same meaning. Equivalently, a proposition is the non-linguistic bearer of truth or falsity which makes any sentence that expresses it either true or false.

Proposition - Wikipedia

The term 'proposition' has a broad use in contemporary philosophy. It is used to refer to some or all of the following: the primary bearers of truth-value, the objects of belief and other "propositional attitudes" (i.e., what is believed, doubted, etc. [1]), the referents of that -clauses, and the meanings of sentences.

Propositions (Stanford Encyclopedia of
Philosophy)

This conception of a proposition was supported by the philosophical school of logical positivism. Some philosophers argue that some (or all) kinds of speech or actions besides the declarative ones also have propositional content. For example, yes–no questions present propositions, being inquiries into the truth value of them.

Proposition - Wikipedia

Propositional knowledge is not so different from a priori and explicit knowledge. The key attribute is knowing that something is true. Again, mathematical equations could be an example of propositional knowledge, because it is knowledge of something,

Noun. An understanding retained in the mind, from experience, reasoning and/or imagination; a generalization (generic, basic form), or abstraction (mental impression), of a particular set of instances or occurrences (specific, though different, recorded manifestations of the concept). Frege's concepts are very nearly propositional functions in the modern sense.

Concept vs Philosophy - What's the difference? | WikiDiff

Propositional content makes up both the meaning of sentences and the content of propositional attitudes such as belief. One particular view about

Get Free A Philosophical Conception Of

Propositional content has been dominant in analytic philosophy, namely the Fregean conception of propositions as abstract mind-independent objects that come with truth conditions.

Act-Based Conceptions of Propositional Content ...

Propositional Logic. Propositional logic, also known as sentential logic and statement logic, is the branch of logic that studies ways of joining and/or modifying entire propositions, statements or sentences to form more complicated propositions, statements or sentences, as well as the logical relationships and properties that are derived from these methods of combining or altering statements.

Encyclopaedia of Philosophy Logic

In terms of both propositional and first-order logic the concepts of necessary and sufficient conditions are intimately related to the concept of the conditional (i.e. a statement of the form “if p , then q ”) as the following canonical account makes clear. [1]

Where $S(p, q)$ means “ p is a sufficient condition for q ” and $N(q, p)$ means “ q is a necessary condition for p ”, $p \supset q$ means “if p , then q ,” and $p \supset q \equiv p \supset q$ means “ p and q are logically equivalent ...

In this paper I sketch the general outlines of measurement?theoretic accounts of propositional attitudes, explaining in the briefest terms the basic idea of such accounts, why some have thought such accounts plausible, how these accounts might go, what their implications might be both for our conception of propositional attitudes and for their role in cognitive scientific theorizing, and ...
