Introduction to the World of Work Synopsis We have subdivided the modules into personal and business since this seems a logical approach. Educationalists suggest an inductive approach to education is the best one where we go from the experience of the students to the underlying principles and therefore we have put in the personal modules first. The objective of all the modules is both to help people within schools or colleges to be faced with realistic choices which can be answered if necessary in the classroom but also to provide material which can be used by young people working on their own. Young people need to have transferable skills and some of these can be obtained by looking at the ways in which businesses approach them. It is therefore worthwhile trying to build up a portfolio of ways in which businesses have these approaches and to see which ones are effective and why, also which ones are totally misplaced.

The highly-respected book of reference of sought-after Independent Schools in membership of the Independent Schools Council's Associations: HMC, GSA, The Society of Heads, IAPS, ISA and COBIS.

Essential revision guide matching the OCR specification will help your students refresh their knowledge of tricky concepts with past paper exam questions. Features include: a dedicated chapter exclusively for mixed examination practice; plenty of worked examples; questions colour-coded according to grade; exam-style questions; feature boxes throughout of exam hints and tips.

In Mothering by Degrees, Jillian Duquaine-Watson shows how single mothers pursuing college degrees must navigate a difficult course as they attempt to reconcile their identities as single moms, college students, and in many cases, employees. They also negotiate a balance between what they think a good mother should be, and what society is telling them, and how that affects their choices to go to college, and whether to stay in college or not. The first book length study to focus on the lives and experiences of single mothers who are college students, Mothering by Degrees points out how these women are influenced by dominant American ideologies of motherhood, and the institutional parameters of the schools they attend, and argues for increased attention to the specific ways in which the choices, challenges, and opportunities available to mothers are shaped within their specific environments, as well as the ways in which mothers help shape those environments...

College students are now regarded as consumers, not students, and nowhere is the growth and exploitation of the university more obvious than in the realm of college sports, where the evidence is in the stadiums built with corporate money, and the crowded sporting events sponsored by large conglomerates. The contributors to Sport and the Neoliberal University examine how intercollegiate athletics became a contested terrain of public/private interests. They look at college sports from economic, social, legal, and cultural perspectives to cut through popular mythologies regarding intercollegiate athletics and to advocate for increased clarity about what is going on at a variety of campuses with regard to athletics. Focusing on current issues, including the NCAA, Title IX, recruitment of high school athletes, and the Penn State scandal, among others, Sport and the Neoliberal University shows the different ways institutions, individuals, and corporations are interacting with university athletics in ways that are profoundly shaped by neoliberal ideologies.

New 2017 Cambridge A Level Maths and Further Maths resources to help students with learning and revision. Written for the OCR AS/A Level Mathematics specifications for first teaching from 2017, this print Student Book covers the content for AS and the first year of A Level. It balances accessible exposition with a wealth of worked examples, exercises and opportunities to test and consolidate learning, providing a clear and structured pathway for progressing through the course. It is underpinned by a strong pedagogical approach, with an emphasis on skills development and the synoptic nature of the course. Includes answers to aid independent study.

A new series of bespoke, full-coverage resources developed for the 2015 GCSE Mathematics qualifications. Endorsed for the Edexcel GCSE Mathematics Higher tier specification for first teaching from 2015, this Student Book provides full coverage of the new GCSE Mathematics qualification. With a strong focus on developing problem-solving skills, reasoning and fluency, it helps students understand concepts, apply techniques, solve problems, reason, interpret and communicate mathematically. Written by experienced teachers, it also includes a solid breadth and depth of quality questions set in a variety of contexts. GCSE Mathematics Online - an enhanced digital resource incorporating progression tracking - is also available, as well as a free Teacher's Resource, Problem-solving Books and Homework Books.
