The energy industry is boiling over with changes. Deregulation, new opportunities in foreign fields and markets and environmental challenges are rushing together head-on to shape the energy and utilities business of the future. Extremely deep offshore wells in the Gulf of Mexico and offshore of West Africa are being drilled at immense cost. Meanwhile China has become a major energy importer and Russia has become a major exporter. In the U.S., Europe and Japan, renewable and alternative energy sources are developing quickly, including big breakthroughs in wind power and fuel cells. This exciting new reference book covers everything from major oil companies to electric and gas utilities, plus pipelines, refiners, retailers, oil field services and engineering. Petroleum topics include upstream and downstream. Additional topics include coal, natural gas and LNG. More than a dozen statistical tables cover everything from energy consumption, production and reserves to imports, exports and prices. Next, our unique profiles of the Energy 500 Firms are also included, with such vital details as executive contacts by title, revenues, profits, types of business, web sites, competitive advantage, growth plans and more. Purchasers of either the book or PDF version can receive a free copy of the company profiles database on CD-ROM, enabling key word search and export of key information, addresses, phone numbers and executive names with titles for every company profiled.

In the twenty-eighth edition of *How Ottawa Spends* leading Canadian scholars examine the Harper government agenda in the context of Stéphane Dion's election as Liberal opposition leader and the emergence of climate change as a dominant political and policy issue. This volume focuses on Quebec-Canada relations and federal-provincial fiscal imbalance. Contributors explore several key policy and expenditure issues, including Canada-U.S. relations, the Federal Accountability Act, energy policy, health care, child care, crime and punishment, consumer policy, and public service labour relations. They also offer a critical analysis of the challenges to overall governance, including ministerial responsibility, public-private partnerships, and the handling of long-term spending commitments inherited by succeeding governments. Contributors include Timothy Barkiw (Ryerson), Gerard Boychuk (Waterloo), Keith Brownsey (Mount Royal College, Calgary), Peter Graefe (McMaster), Geoffrey Hale (Lethbridge), Carey Hill (Western Ontario), Ruth Hubbard (Ottawa), Derek Ireland (PhD student, Carleton), Rachel Laforest (Queen's), Ian Lee (Carleton), Trevor Lynn (Saskatchewan), Jonathan Malloy (Carleton), Scott Millar (Government of Canada), Gilles Paquet (emeritus, Ottawa), Michael Prince (Victoria), Christopher Stoney (Carleton), Gene Swimmer (Carleton), Katherine Teghtsoonian (Victoria), Andrew Teliszewsky (Ontario Minister of Health Promotion), Lori Turnbull (Dalhousie), and Kernaghan Webb (Ryerson University).

Wind Energy Conversion System covers the technological progress of wind energy conversion systems, along with potential future trends. It includes recently developed wind energy conversion systems such as multi-converter operation of variable-speed wind generators, lightning protection schemes, voltage flicker mitigation and prediction schemes for advanced control of wind generators. Modeling and control strategies of variable speed wind generators are discussed, together with the frequency converter topologies suitable for grid integration. Wind Energy Conversion System also describes offshore farm technologies including multi-terminal topology and space-based wind observation schemes, as well as both AC and DC based wind farm topologies. The stability and reliability of wind farms are discussed, and grid integration issues are examined in the context of the most recent industry guidelines. Wind power smoothing, one of the big challenges for transmission system operators, is a particular focus. Fault ride through and frequency fluctuation mitigation using energy storage options are also covered. Efficiency analyses are presented for different types of commercially available wind turbine generator systems, large scale wind generators using superconducting material, and the integration of offshore wind and marine current farms. Each chapter is written by a leader in the wind energy arena, making Wind Energy Conversion System a valuable reference for researchers and students of wind energy.

The energy industry is boiling over with changes. Deregulation, new opportunities in foreign fields and markets and environmental challenges are rushing together head-on to shape the energy and utilities business of the future.
