Nansen's Fram expedition of 1893–1896 was an attempt by the Norwegian explorer Fridtjof Nansen to reach the geographical North Pole by harnessing the natural east–west current of the Arctic Ocean. In the face of much discouragement from other polar explorers, Nansen took his ship Fram to the New Siberian Islands in the eastern Arctic Ocean, froze her into the pack ice, and waited for the ...

The North Pole is the northernmost point on Earth. It is the precise point of the intersection of the Earth's axis and the Earth's surface. From the North Pole, all directions are south. Its latitude is 90 degrees north, and all lines of longitude meet there (as well as at the South Pole, on the opposite end of the Earth). Polaris, the current North Star, sits almost motionless in the sky ...

Polaris, designated ϵ Ursae Minoris, commonly the North Star or Pole Star, is the brightest
star in the constellation of Ursa Minor. It is very close to the north celestial pole, making it the
current northern pole star. The revised Hipparcos parallax gives a distance to Polaris of about
433 light-years, while calculations by other methods derive distances around 30% closer.
Polaris is a triple star system, composed of the primary star, Polaris Aa, in orbit with a smaller
companion; the pair in
