Section 3 Rna And Gene

1. RNA polymerase unwinds the two DNA strands.
2. RNA polymerase copies the genetic instructions to form a strand of mRNA.
3. The mRNA carries the genetic instructions through the nuclear pore complex into the cytoplasm to a ribosome subunit.
4. The mRNA attaches to a ribosome subunit.

13.1 RNA Lesson Objectives Contrast
RNA and DNA. Explain the process of
transcription. Lesson Summary The
Role of RNA RNA (ribonucleic acid) is a
nucleic acid like DNA. It consists of a
long chain of nucleotides.

Ribonucleic acid, a nucleic acid present in all living cells. Its principal role is to act as a messenger carrying instructions from DNA for controlling the synthesis of proteins, although in some viruses RNA rather than DNA carries the genetic information. nucleic acid.

Rna And Protein Synthesis Answer
Key Chapter 13

13.2 Ribosomes and Protein Synthesis. What is the genetic code and how is it read? Bases (in the case of RNA)- A,U, C, and G form the genetic code. Code is read 3 letters @ a time. Each “ word ” is 3 bases long, and corresponds to an amino acid. Each 3 letter “ word ” = codon
