With open rhinoplasty with the transcolumellar incision technique, the type of surgery can be more easily controlled, however, extended nasal tip edema and columellar scar are some of the disadvantages of this method. ORWTI allows a patient to avoid these disadvantages and provides a more controlled procedure, similar to the open method.

Commentary on "Comparison of Various Rhinoplasty ...

Rhinoplasty is one of the most popular aesthetic surgeries in Michigan, it allows one to reduce or increase the size of their nose, change the shape of the tip or back, narrow the nostrils or change the angle between the nose and the upper lip. This surgery is used when there is a disproportion between the shape of the nose and the rest of the face.
