eface Yeasts are eukaryotic unicellular
microfungi that are widely distributed in
the natural environments. Although yeasts
are not as ubiquitous as bacteria in the na-
ral environments, they have been isolated

from terrestrial, aquatic and atmospheric environments. Yeast communities have been found in association with plants, animals and insects. Several species of yeasts have also been isolated from specialized or extreme environments like those with low water potential (e. g. high sugar/salt concentrations), low temperature (e. g.

studies grew rapidly during the period of
the International Biological Programme
(Reichle 1981). Each of these forests
represented aspects of local and general
