For courses in Drugs and Crime, Drugs and Criminal Justice, Drugs and Society, and The Sociology of Substance Abuse Drugs, Society, and Criminal Justice is a highly readable introduction to the major facts and issues concerning criminal justice and drug-taking behavior in America today. Building on sociological theory, it explores the social problems associated with drug use and the theoretical reasons for drug use and abuse. It then delves into the complex relationship between drug-taking behavior and crime. Distinctive chapters include: Understanding the Drug Problem in America (Chapter 1), Understanding the Drug Problem in Global Perspective (Chapter 2), The History of Drug Use and Drug-Control Policy (Chapter 3), Drugs and Crime (Chapter 6), Drugs and Law Enforcement (Chapter 7), and Drugs, Courts, and Correctional Systems (Chapter 8). Discussion-starting features spotlight prominent figures, drug trafficking realities, and life-saving information as the book explores how drug use and abuse impact the criminal justice system.

Designed for the introduction to drugs and substance abuse course as taught in departments of health education, psychology, biology, sociology, and criminal justice, this full-color market-leading text provides the latest information on drugs and their effects on society and human behavior. For over thirty years, instructors and students have relied on it to

examine drugs and behavior from the behavioral, pharmacological, historical, social, legal, and clinical perspectives.

This title was first published in 2000: Drugs play an important role throughout the world. In industrialized countries where a formal approval process governs the introduction of new medicinal agents, thousands of chemicals are in use as drugs. This book provides a detailed picture of this marketplace. Grouped by their medicinal use and biological activity, 8,000 drugs in common use around the world are described. For each, the chemical name and a list of trade names and synonyms are provided; the CAS Registry Number and the European Inventory of Existing Chemical Substances (EINECS) Number are given; the physical properties of each compound are described, and the known biological activity and indicated applications are presented. Indexes, including a master index of name and synonyms, are appended. This compendium should be valuable to physicians, research chemists, biologists and the lay public who, with a single synonym for a drug, will be able to quickly find a thumbnail sketch of the essential information concerning the agent

A gripping, ultimately triumphant memoir that's also the most comprehensive and comprehensible study of the neuroscience of addiction written for the general public. FROM THE INTRODUCTION: "We are prone to a cycle of craving what we don't have, finding it, using it up or losing it, and then craving it all the more. This cycle is at the root of all addictions, addictions to drugs, sex, love, cigarettes, soap operas, wealth, and wisdom itself. But why should this be so? Why are we desperate for what we don't have, or can't have, often at great cost to what we do have, thereby risking our

peace and contentment, our safety, and even our lives?" The answer, says Dr. Marc Lewis, lies in the structure and function of the human brain. Marc Lewis is a distinguished neuroscientist. And, for many years, he was a drug addict himself, dependent on a series of dangerous substances, from LSD to heroin. His narrative moves back and forth between the often dark, compellingly recounted story of his relationship with drugs and a revelatory analysis of what was going on in his brain. He shows how drugs speak to the brain - which is designed to seek rewards and soothe pain - in its own language. He shows in detail the neural mechanics of a variety of powerful drugs and of the onset of addiction, itself a distortion of normal perception. Dr. Lewis freed himself from addiction and ended up studying it. At the age of 30 he traded in his pharmaceutical supplies for the life of a graduate student, eventually becoming a professor of developmental psychology, and then of neuroscience - his field for the last 12 years. This is the story of his journey, seen from the inside out.
