Experiments in physical chemistry (Book, 1981) [WorldCat.org]

Conducted in a nearly weightless environment, experiments in these disciplines reveal how physical systems respond to the near absence of buoyancy-driven convection, sedimentation or sagging. They also reveal how other forces, such as capillary forces, which are small compared to gravity, can dominate the system behavior in space.

The Physical and Atmospheric Chemistry Research Interest group has two broad but overlapping aims. One is to understand the properties of molecular systems in terms of physical principles. This work underpins many developing technological applications that affect us all, such as nanotechnology, sensors and molecular medicine. The other is atmospheric chemistry, where we study the interactions between chemical composition, climate and health, using a range of computer modelling and ...
