A Formula One car is a single-seat, open cockpit, open-wheel racing car with substantial front and rear wings, and an engine positioned behind the driver, intended to be used in competition at Formula One racing events. The regulations governing the cars are unique to the championship and specify that cars must be constructed by the racing teams themselves, though the design and manufacture can be outsourced.

The heart of a Formula One car is the chassis -- the part of the automobile onto which everything is bolted and attached. Like most modern cars and aircraft, Formula One race cars feature monocoque construction. Monocoque is a French word meaning "single shell," which refers to the process of making the entire body out of a single piece of material.

Modern Formula One cars have a chassis made largely of carbon-fibre composites. This helps make the car light, but extremely durable at the same time. If the construction of the car is lighter than the minimum, it can be ballasted up to add the necessary weight. It is also worth noting that all F1 team use their own chassis.

~~What is the Difference Between Formula One, F2 and F3 ...~~

Formula One cars are the fastest regulated road-course racing cars in the world, owing to very high cornering speeds achieved through the generation of large amounts of aerodynamic downforce. The cars underwent major changes in 2017, [3] allowing wider front and rear wings, and wider tyres , resulting in peak cornering forces near 6.5 lateral g and top speeds of up to approximately 350 km/h (215 mph).
