Human Tooth Crown and Root
Morphology by G. Richard Scott
The anatomic crown of a tooth is
the area covered in enamel above

File Type PDF Human Tooth Crown And Root

the cemento-enamel junction (CEJ) or "neck" of the tooth. Most of the crown is composed of dentin ("dentine" in British English) with the pulp chamber inside. The crown is within bone before eruption. After eruption, it is almost always visible. The

File Type PDF Human Tooth Crown And Root

anatomic root is found below the CEJ and is covered with cementum. As with the crown, dentin composes most of the root, which normally has pulp canals.

Human tooth - Wikipedia

File Type PDF Human Tooth Crown And Root

The crown is the place of the enamel and part of the dentin layer. Tooth crown damage, which has long been referred to as a cavity, is the most common type of dental disease. Teeth neck. The neck of the tooth is the part that sits between the crown
