Journal Impact Factors - Annual Reviews

The impact factor is beneficial, but when it comes to quality, then the use of the impact factor is not right. According to the database of the year 2017, the journal citation reports, tracked the impact factor for nearly 12, 298 journals. According to the database, out of the 12, 298 journals, just 239 titles, or 1.9 percent journals that were tracked by the JCR, impact factor of 10 or higher.

Scimago Journal & Country Rank

Journal ranking is widely used in academic circles in the evaluation of an academic journal's impact and quality. Journal rankings are intended to reflect the place of a journal within its field, the relative difficulty of being published in that journal, and the prestige associated with it. They have been introduced as official research evaluation tools in several countries.

---

Journal ranking - Wikipedia

In this year 's reports, 94 SAGE journals have received a top 10 category rank, with 19 journals receiving their first Impact Factor (IF). 199 titles are now placed in the top 30% of the JCR, and 56% of SAGE journals are ranked within the top half of their subject category.

---

Impact Factor & Ranking Results | SAGE Publications Ltd

The impact factor or journal impact factor of an academic journal is a scientometric index that reflects the yearly average number of citations that articles published in the last two years in a given journal received. It is frequently used as a proxy for the relative importance of a journal within its field; journals with higher impact factors are often deemed to be more important than those with lower ones.

---

Impact factor - Wikipedia

The impact factor is a measure of the frequency with which the average article in a journal has been cited in a particular year. The JCR also lists journals and their impact factors and ranking in the context of their specific field (s).

---

How do I find the impact factor and rank for a journal?

This list provides a simple impact factor, computing a ratio of the number of citations by the number of items in the series. Citation counts are adjusted to exclude citations from the same series. These computations are experimental and based on the citation analysis provided by the CitEc project, which uses data from items listed in RePEc. Only series or journals with 50 or more items are ranked.
