We have been deploying Lean Six Sigma in various large and medium size companies for many years and have realized excellent results in most instances. We found that while Lean Six Sigma does a great job addressing the primary concerns of manufacturing and service, we felt that there was something missing in the deployment of Lean Six Sigma programs at many companies. Something that could help foster sustainable breakthroughs; something to realize durable performance and sustainable quality enhancement based on a happy and engaged workforce, something to create a real learning organization in which people are working smarter, are committed and improve themselves continuously. We found that the results could be enhanced if the importance of Human Capital is considered as an integral part of the process. We learned that Lean Six Sigma, in itself, does not sufficiently address Human Capital at many companies. While expected results from Lean Six Sigma alone will be good, we believe that adding the human component to Lean Six Sigma has the potential to realize sustainable, long-term growth and produce a transformation into a lean, learning, prosperous organization. That's why we are launching a revolutionary, holistic concept in this book called TPS-Lean Six Sigma. Combining these complimentary processes actively brings human involvement into Lean Six Sigma in a manner that not only stimulates commitment, integrity, work-life balance, and passion, enjoyment at work and employee engagement but also stimulates individual and team learning in order to develop a happy workforce and sustainable performance improvement and quality enhancement for the organization. TPS-Lean Six Sigma is a continuous voyage of discovery involving continuous personal and organizational improvement, development, and learning. The starting point in this concept is a journey to understand personal goals and ambitions of the workforce. Then we take the organizations goals and ambitions and marry them with the workforce, and find the best people for the job. Using our structured approach for aligning the personal scorecards with the organization's scorecard, we are able to create a symbiotic relationship between employees and organizational desires through the establishment of Lean Six Sigma project teams that will enthusiastically drive positive results. TPS-Lean Six Sigma is like a 'turbo-charged' Lean Six Sigma program. All of the proven, sound methodologies of traditional Lean Six Sigma are charged with highly motivated team members. The result is a powerful people driven Lean Six Sigma program called TPSLean Six Sigma that leads to a High Performance Culture and allows employees to realize their full potential and contribute creatively while the organization benefits from increased profitability, market share, and customer satisfaction. People are happiest when they are given freedom, challenges, and control over their lives. TPS-Lean Six Sigma also offers a systematic and integrated approach to the transformation of people in organizations, and to impact business strategy, culture, organizational effectiveness and the controllability of business processes. It entails a learning process, which transforms people into happy, inwardly involved, and committed employees. This will not only allow them to contribute exceptionally but will also persuade them to support, defend, and promote their organization. This approach lies at the heart of successful organizational and cultural change. After all, it is difficult to change the organization, but if we change ourselves, the organization will change with us. This unique TPS-Lean Six Sigma system is based on several new models, guidelines and tools that have been proven in practice. It integrates the individual's aspirations with the shared ambition of the organization, balancing the personal with the shared ambition, embedding ethical behavior in the individual's mind and links individual capabilities with an effective talent management process. TPS-Lean Six Sigma and the related new tools provide an excellent and innovative framework for creating sustainable breakthroughs in both the service and manufacturing industries. This new book emphasizes the introduction of a new blueprint, called TPS-Lean Six Sigma, for addressing the primary concerns of manufacturing and service in a more sustainable and humanized way. It leads to a High Performance Culture and allows employees to realize their full potential and contribute creatively while the organization benefits from increased profitability, market share, and customer satisfaction. By way of this book, Hubert Rampersad & Anwar El-Homsi are launching a revolutionary, holistic concept which actively has human capital embedded in Lean Six Sigma in a manner that not only stimulates commitment, integrity, work-life balance, passion, enjoyment at work and employee engagement but also stimulates individual and team learning in order to develop a motivated workforce and sustainable performance improvement and quality enhancement for the organization.
