In 1889 a gold rush broke out on the Witwatersrand, changing South Africa's history forever. More than 130 years later the mining industry is still one of the biggest drivers of the economy, but at the expense of those who work underground. *Broke & Broken* is the story of the thousands of men from South Africa and beyond its borders who paid with their lives for generations. These are men who left their homes as healthy, ambitious youngsters and returned broke, broken and bitter; victims of the shameful legacy of gold mining. The book seeks to say the names of the mineworkers who have built this country's economy, because their own stories and their own spirits need to be magnified. The precious stone they spent most of their lives digging brought no shine to their lives - only pain, tears and death.

Science, engineering, and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific and engineering practices; and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the

applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.
