Definition of memory 1 a : the power or process of reproducing or recalling what has been learned and retained especially through associative mechanisms began to lose his memory as he grew older

### Memory | Definition of Memory by Merriam-Webster

Memory is the faculty by which the brain encodes, stores, and retrieves information. It is a record of experience for guiding future action.

### Memory | Psychology Today

Memory is the faculty of the brain by which data or information is encoded, stored, and retrieved when needed. It is the retention of information over time for the purpose of influencing future action. If past events could not be remembered, it would be impossible for language, relationships, or personal identity to develop. Memory loss is usually described as forgetfulness or amnesia.

### Memory - Wikipedia

Memory, the encoding, storage, and retrieval in the human mind of past experiences. The fact that experiences influence subsequent behaviour is evidence of an obvious but nevertheless remarkable activity called remembering. Memory is both a result of and an influence on perception, attention, and learning.

### memory | Definition, Retrieval, & Forgetting | Britannica

Memory refers to the processes that are used to acquire, store, retain, and later retrieve information. There are three major processes involved in memory: encoding, storage, and retrieval. Human memory involves the ability to both preserve and recover information we have learned or experienced.

### What Is Memory? - Verywell Mind

Memory is the process of storing and then remembering this information. There are different types of memory. Short-term memory stores information for a few seconds or minutes. Long-term memory stores it for a longer period of time.

### Maroon 5 - Memories (Official Video) - YouTube

Reminiscence is the process of recalling the past. The memories produce a product: a biography, a story, or a narrative. The product is accessed and reconstructed throughout one's life, and current events continue to color and influence the memory.

### Memory - an overview | ScienceDirect Topics

In computing, memory refers to a device that is used to store information for immediate use in a computer or related computer hardware device. It typically refers to semiconductor memory, specifically metal-oxide-semiconductor (MOS) memory, where data is stored within MOS memory cells on a silicon integrated circuit chip.
