Looking over the vast open plains of eastern Colorado, western Kansas, and southwestern Nebraska, where one can travel miles without seeing a town or even a house, it is hard to imagine the crowded landscape of the last decades of the nineteenth century. In those days farmers, speculators, and town builders flooded the region, believing that rain would follow the plow and that the "Rainbelt" would become their agricultural Eden. It took a mere decade for drought and economic turmoil to drive these dreaming thousands from the land, turning farmland back to rangeland and reducing settlements to ghost towns. David J. Wishart's *The Last Days of the Rainbelt* is the sobering tale of the rapid rise and decline of the settlement of the western Great Plains. History finds its voice in interviews with elderly residents of the region by Civil Works Administration employees in 1933 and 1934. Evidence similarly emerges from land records, climate reports, census records, and diaries, as Wishart deftly tracks the expansion of westward settlement across the central plains and into the Rainbelt. Through an examination of migration patterns, land laws, town-building, and agricultural practices, Wishart re-creates the often-difficult life of settlers in a semiarid region who undertook the daunting task of adapting to a new environment. His book brings this era of American settlement and failure on the western Great Plains fully into the scope of historical memory.

\*Family has always been at the foundation of Indian society, and even contemporary people continue to take pride in the centrality of family life. But, the fast pace and all-embracing socio-political and economic changes in recent years are having a significant impact on individuals and families. In the age of electronic media, the Indian family is being exposed to ideas, ideals and lifestyles that are challenging the structure and stability of family as a social institution. Indian families are not well prepared or equipped to face the competitive and challenging world of today. Either, they are lacking correct information or receiving misinformation from dubious sources that are doing more harm than good. Young people are exposed to an entirely new pattern of living and a new set of mores, values and standards that are being widely accepted but which stand in contrast to those which were promoted by their parents and grandparents. Such a situation of Indian family calls for an education which can teach youth with regard to the knowledge, attitude and skills required for a successful family living. Family Life Education (FLE) has tremendous potentials to do so. Though the idea of FLE is relatively new to India but as part of a comprehensive mental health effort in India, it holds great promise as a keeper and restorer of the family unit. This book explores the range of marital and family difficulties, and examines how an FLE movement might take root in the context of the current mental health system and social service practice. It also discusses the content, scope and potential benefits of FLE training and services in meeting the tremendous needs of married couples and families. It is hoped that this book will fill an important gap in the Indian Family Science literature, and serve as a catalyst for needed changes in social policy and community development programmes.\*

During an apocalyptic battle against murderous machines and hardened soldiers a lone salvage marine turns the tide with a devastating counter attack. Having revealed herself as a consummate warrior, Jada Sek is welcomed into the ranks of the Dire Swords, an elite fighting force loyal only to the contract. As the other marines return to their salvage duties Jada and her new comrades, each as haunted by the ghosts of their past as she is, plunge yet further into necrospace. They are repeatedly deployed to disrupt and destroy the endeavors of corporate competitors, and along the way discover that the enigma of the machine race is more sinister and complex than any imagined. Surrounded by the specters of an ancient holocaust and forced to face her inner conflict, Jada must make a choice. When the money ceases to matter, when surviving loses its significance, and the thrill of taking the fight right into the teeth of the enemy seems like the only truth left in this scrapyard of a universe, it is time to let the marine die so that the mercenary can be born.

Zar Evans is not your typical high school senior; in fact she is anything but normal. Dressing to the trendiest Goth fashion, Zar wears nothing but black from head to toe. Not that this warrants unwanted attention, but she is also top in her class and is looking at a full academic scholarship to Iowa State in the fall. Loudon Clarke is an all star athlete. He plays three varsity sports and has the world in his hands. Except for one thing; Loudon is failing majority of his subjects. He is about to be suspended from the basketball team risking his athletic scholarship. Zar and Loudon would normally never cross paths, until these two are brought together when Zar's brother proposes to Loudon's sister. With an upcoming wedding and a lot of planning Zar and Loudon are stuck with one another regardless of their differences. Zar has hidden behind the pain she deals with on a daily basis for years. Loudon has never had to feel pain nor the ignorance of his peers. Can opposites really bring these two together or will they be pulled even further apart. Only one thing is for sure, it is impossible to fight the connection of pierced love when one is willing to change for happiness.

Tackle the Challenges of Parallel Programming in the Visual Effects Industry In Multithreading for Visual Effects, developers from DreamWorks Animation, Pixar, Side Effects, Intel, and AMD share their successes and failures in the messy real-world application area of production software. They provide practical advice on multithreading techniques and visual effects used in popular visual effects libraries (such as Bullet, OpenVDB, and OpenSubdiv), one of the industry's leading visual effects packages (Houdini), and proprietary animation systems. This information is valuable not just to those in the visual effects arena, but also to developers of high performance software looking to increase performance of their code. *Diverse Solutions to Solve Performance Problems* After an introductory chapter, each subsequent chapter presents a case study that illustrates how the authors used multithreading techniques to achieve better performance. The authors discuss the problems that occurred and explain how they solved them. The case studies encompass solutions for shaving milliseconds, solutions for optimizing longer running tasks, multithreading techniques for modern CPU architectures, and massive parallelism using GPUs. Some of the case studies include open source projects so you can try out these techniques for yourself and see how well they work.
