Toroidal confinement. The most extensively investigated toroidal confinement concept is the tokamak. The tokamak (an acronym derived from the Russian words for " toroidal magnetic confinement ") was introduced in the mid-1960s by Soviet plasma physicists. The magnetic lines of force are helixes that spiral around the torus.

Fusion reactor - Principles of magnetic confinement ...
Most research effort has been directed towards magnetic confinement technology. The plasma geometry is usually based on the toroidal " tokamak " configuration invented by Tamm and Sakharov in 1950 and declassified in 1957 [1]. Over 198 tokamaks have been built [2]. Four large tokamak projects were built in the 1980s. Two of these, the American
