Newborn Case Studies Baby Ittybit - svti.it

Case study 4. A well newborn infant is given clear feeds of 5% dextrose for the first day. As the mother is tired after the delivery, the infant is immediately sent to the nursery. On day 3 the mother is advised to bottle feed as her milk appears to be too weak. She is a poor woman who plans to return to a rural district.

Primary Newborn Care: 2. Care of normal infants

Meconium is the first stool that is passed by the infant, and normally this occurs after birth. Occasionally this occurs in utero, and contaminates the amniotic fluid. Risks to the infant include asphyxia, meconium aspiration, and pneumonia related to meconium aspiration.

Maternal Newborn Case Study - Yola

The infant passed a dark stool at the first 48 hours (meconium) at a frequency of two to three times per day. In the next 72 hours after birth, the infant passes a light

green stool because of maternal milk. Voiding pattern: the infant urinates at least six times per day. The color of the urine is pale yellow.

Case Study: Neonatal sepsis - Daily RN

Case Study Jerod is delivered by caesarean section and transferred to the pediatric intensive care unit (PICU). On admission to the nursery he weighs 3.4 kg (7.5 lb) and is 8 cm (20 in.) in length. His vital signs are: Temperature: 37 ° C (98.6 ° F) Pulse: 144 beats/minute Respirations: 40 breaths/minute He has bulging fontanelles and a high-pitched cry.

Case Study 01 - DelmarLearning.com

For hundreds of years, doctors, nurses and midwives have visually examined newborn babies for the yellowish skin tones that signify jaundice, judging that more extensive jaundice carried a greater risk of illness. Galactosemia is included as part of the newborn screening. This condition is considered to be an inborn error of metabolism.
