applied to preconcentrate nanoparticles or bio/chemical molecules to a desirable location for enhanced sensitivity. For example, centrifugal and electrokinetic forces can be used to accumulate analytes near the sensing spots [35,36]. Recently, a passive preconcentration method was developed without pressure-driven or electrokinetic-driven flow.

Optofluidics is a research and technology area that combines the advantages of microfluidics and optics.

Applications of the technology include displays, biosensors, lab-on-chip devices, lenses, and molecular imaging tools and energy.
