Esterification reactions 1 salicylic ...

Esters can be synthesized artificially in labs by combining alcohols and acids of different strengths. This lab contained the synthesis of an ester by allowing different carboxylic acids to react with alcohols, using sulphuric acid as a catalyst, to create esters and allow the student to identify them by their distinct smell.

Preparation Of Esters Lab Answers Larger esters tend to form more slowly. In these cases, it may be necessary to heat the reaction mixture under reflux for some time to produce an equilibrium mixture. The ester can be separated from the carboxylic acid, alcohol, water and sulphuric acid in the mixture by fractional distillation. Page 8/28
