The book deals with the propagation and absorption of high frequency waves in plasmas (hot fully ionized gases), a subject on which work is very active in controlled fusion research (the quest for energy from nuclear reactions similar to those going on within the sun) and in astrophysics. The subject is by its nature a multi-disciplinary application (and a very rich and interesting one) of classical physics. The book could therefore be useful as a source for courses on electromagnetism or classical kinetic theory at a medium to advanced level.

An essential resource for learning about general relativity and much more, from four leading experts Important and useful to every student of relativity, this book is a unique collection of some 475 problems--with solutions--in the fields of special and general relativity, gravitation, relativistic astrophysics, and cosmology. The problems are expressed in broad physical terms to enhance their pertinence to readers with diverse backgrounds. In their solutions, the authors have attempted to convey a mode of approach to these kinds of problems, revealing procedures that can reduce the labor of calculations while avoiding the pitfall of too much or too powerful formalism. Although well suited for individual use, the volume may also be used with one of the modern textbooks in general relativity.

Cambridge, Massachusetts, 3-5 November 2003

In this new edition of Renewable Energy Systems, globally recognized renewable energy researcher and professor, Henrik Lund, sets forth a straightforward, comprehensive methodology for comparing different energy systems' abilities to integrate fluctuating and intermittent renewable energy sources. The book does this by presenting an energy system analysis methodology. The book provides the results of more than fifteen comprehensive energy system analysis studies, examines the large-scale integration of renewable energy into the present system, and presents concrete design examples derived from a dozen renewable energy systems around the globe. Renewable Energy Systems, Second Edition also undertakes the socio-political realities governing the implementation of renewable energy systems by introducing a theoretical framework approach aimed at understanding how major technological changes, such as renewable energy, can be implemented at both the national and international levels. Provides an introduction to the technical design of renewable energy systems Demonstrates how to analyze the feasibility and efficiency of large-scale systems to help implementers avoid costly trial and error Addresses the socio-political challenge of implementing the shift to renewables Features a dozen extensive case studies from around the globe that provide real-world templates for new installations

The completely revised edition of "Understanding Japanese Information Processing" supplements each chapter with details about how Chinese, Korean, and Vietnamese scripts are processed on computer systems. New information, such as how these scripts impact contemporary Internet resources (such as the WWW and Adobe Acrobat) is provided.

The Nag Hammadi Scriptures, edited by Marvin Meyer, is the most complete, up-to-date, one-volume, English-language edition of the renowned library of Gnostic manuscripts discovered in Egypt in 1945, which rivaled the Dead Sea Scrolls find in significance. It includes the Gospel of Thomas, the Gospel of Mary, and the recently discovered Gospel of Judas, as well as other Gnostic gospels and sacred texts. This volume also includes introductory essays, notes, tables, glossary, index, etc. to help the reader understand the context and contemporary significance of these texts which have shed new light on early Christianity and ancient thought. The compilation of ancient manuscripts that constitute The Nag Hammadi Scriptures is a discovery that challenges everything we thought we knew about the early Christian church, ancient Judaism, and Greco-Roman religions.

Kaveh Akbar writes, "It is so refreshing to discover a poet as rich with magic as Logan February. In Painted Blue with Saltwater, the poet swims with sea monsters, becomes a feather, becomes a window, becomes a safe house by the sea. [And] whatever situation the speaker finds himself in, there is always a way to shapeshift back toward the light."

Pietro Bembo (1470-1547), scholar and critic, was one of the most admired Latinists of his day. The poems in this volume come from all periods of his life and reflect both his erudition and his wide-ranging friendships. This volume also includes the prose dialogue Etna, an account of Bembo's ascent of Mt. Etna in Sicily during his student days.

Using a 3D modelling programme, Ji Lee has developed a three-dimensional alphabet out of the standard Roman letters, and created a teasing challenge for puzzle fans. Instead of ordinary type, he offers pictures of words floating in space. To read them requires using visual clues.
