~~Muscle assignments to the spinal levels Following to the dermatomes and the sclerotomes also the myotomes came closer to the interest of neurologists. The myotomes are segmental origin and refer strictly only to the neurological associations of the muscles to the spinal nerve roots of the respective levels. Muscles are connected synergistically and antagonistically to complex movement patterns into muscle chains. Disturbances in these movement patterns lead to inefficient movement strategies that require a lot of energy and become noticeable as painful muscular trigger points and trigger chains. Further muscular aspects can be found in kinesiology which has discovered clear connections of the muscles to organ functions according to the Traditional Chinese Medicine. Dear friends of reflexology, thank you for your interest in my reflexology charts which have proven their effectiveness in nearly three decades. The charts of the »maps of health« represent the organs as icons. This offers a symbolic language which allows an orientation at a glance in all reflexology systems. The reflexology charts with their descriptive illustrations provide you with a useful aid for your treatments. Additionally you can use the result sheets for documentation of your experiences Joy and success with reflexology ! Ewald Kliegel~~
