Value Analysis Engineering Productivity

As the same output is being achieved by uses of laser input resources, the productivity increases due to the Value engineering. Fields of application of Value engineering: Value engineering uses rational logic and the analysis of function to identify relationships that increase value. Fields where the raw material is scarce, skilled labour is in shortage or component part are not easily available require Value engineering to get most use out of the available substitutes.

How value engineering helps to improve productivity ...

Value engineering is an approach to productivity improvement that attempts to increase the value obtained by a customer of a product by offering the same level of functionality at a lower cost. The term Value Engineering is sometimes used to refer to the application of this process of cost reduction prior to manufacture, while Value Analysis refers to the process when applied to products currently being manufactured.

Value Analysis Engineering Productivity

Cost reduction may be achieved by economizing expenditure and increasing productivity whereas value analysis probes into the economic attributes of value. In value analysis it is possible to improve performance, increase the value of a product and thus reduce costs by a continuous process of planned action.

One of the challenges in a rapidly growing engineering organization is determining how your organization's productivity scales over time.

Companies that grow quickly often face a slow down in output because of inefficiencies and communication challenges.

but measuring the outputs is elusive (Sacks, & Barak 2008). Various engineering productivity measurements have been used in previous research.

Measurement of Engineering Productivity - Performance Metrics
Value engineering analysis is a systematic process which organizations use every time they want to conduct a study of the product's function. The method seeks to know if the function of the product provides the value that the organization intends to give to its consumers. The objective of this method is to improve the value of the end product.
