Science students are expected to produce lab reports, but are rarely adequately instructed on how to write them. Aimed at undergraduate students, *Successful Lab Reports* bridges the gap between the many books about writing term papers and the advanced books about writing papers for publication in scientific journals, neither of which gives much information on writing science lab reports. The first part guides students through the structure as they write a first draft. The second part shows how to revise the report and polish science writing skills as the student continues to write science lab reports.

Teachers want their students to think, learn, and understand. Some teachers are more successful than others in achieving those goals. Two veteran educators provide a clear and detailed description of how to help teachers change their methods and raise the level of both

celebration of the lifelong curiosity, humility, and passion that drive every scientist. In these pages, Hope takes us back to her Minnesota childhood, where she spent hours in unfettered play in her father's college laboratory. She tells us how she found a sanctuary in science, learning to perform lab work "with both the heart and the hands." She introduces us to Bill, her brilliant, eccentric lab manager. And she extends the mantle of scientist to each one of her readers, inviting us to join her in observing and protecting our environment. Warm, luminous, compulsively readable, *Lab Girl* vividly demonstrates the mountains that we can move when love and work come together. Winner of the American Association for the Advancement of Science/Subaru Science Books & Film Prize for Excellence in Science Books Finalist for the PEN/E.O. Wilson Literary Science Writing Award One of the Best Books of the Year: *The Washington Post*, *TIME.com*, *NPR*, *Slate*, *Entertainment Weekly*, *Newsday*, *Minneapolis Star Tribune*, *Kirkus Reviews*

This book is a compilation of articles from the *The American Biology Teacher* journal that present biology labs that are safe, simple, dependable, economic, and diverse. Each activity can be used alone or as a starting point for helping students design follow-up experiments for in-depth study on a particular topic. Students must make keen

observations, form hypotheses, design experiments, interpret data, and communicate the results and conclusions. The experiments are organized into broad topics: (1) Cell and Molecular Biology; (2) Microbes and Fungi; (3) Plants; (4) Animals; and (5) Evolution and Ecology. There are a total of 34 experiments and activities with teacher background information provided for each. Topics include slime molds, DNA isolation techniques, urine tests, thin layer chromatography, and metal adsorption. (DDR)
