Hi Rene, What version of petalinux/meta-adi branch are you using? So, the way to change/extend the devicetree is through system-user.dtsi. Note at the end of device-tree.bbappend we include the system dtsi at the end of the top devicetree. There, you should be able to delete the nodes you want as we do for example for all our pl-delete-nodes-* files (or change nodes).
